

Phishing Awareness Training

Cybersecurity Awareness Presentation

Prepared by: Rudra Patel

Agenda

- Understanding phishing
- Types of phishing
- Anatomy of a phishing email
- Fake websites
- Social engineering
- Red flags
- Real-world examples
- Best practices
- Quiz
- Conclusion

What is Phishing?

A phishing attack tricks users into revealing sensitive information or installing malware by pretending to be a trusted source.

Types of Phishing

- Email Phishing
- Spear Phishing
- Whaling
- Smishing (SMS)
- Vishing (Voice Calls)
- Clone Phishing

Anatomy of a Phishing Email

- Fake sender
- Urgent subject
- Suspicious links
- Unexpected attachment
- Credential request
- Grammar mistakes

Recognizing Fake Websites

- Check domain spelling
- Look for HTTPS (not sufficient alone)
- Inspect login page
- Verify certificates
- Beware pop-ups

Social Engineering

Attackers exploit:

- Trust
- Fear
- Urgency
- Curiosity
- Authority
- Scarcity

Red Flags

- 🚩 Password/OTP requests
- 🚩 Too-good-to-be-true offers
- 🚩 Threatening messages
- 🚩 Unknown attachments
- 🚩 Mismatched URLs

Real-World Example #1

Fake Microsoft 365 login page captures usernames and passwords before redirecting to the legitimate website.

Real-World Example #2

Fake courier delivery SMS asks for a small payment and steals card information.

Best Practices

- Enable MFA
- Use a password manager
- Verify requests separately
- Update software
- Report suspicious emails
- Backup important data

If You Clicked a Phishing Link

1. Disconnect if malware downloaded
2. Change passwords
3. Enable MFA
4. Notify IT/security
5. Scan device

Interactive Quiz

Q1: Is HTTPS always safe?

Q2: Should you share OTPs?

Q3: What should you check before clicking a link?

Q4: Which phishing type uses SMS?

Quiz Answers

1. No
2. Never
3. URL & sender
4. Smishing

Key Takeaways

Think Before You Click.
Verify Before You Trust.
Report Before It's Too Late.

Thank You!
